

Phase-out of Simatic S5 PLC models - Upgrade to S7 models

We would like to point out to our customers that SIEMENS have started to phase their SIMATIC S5 PLC models out of their standard range of products. To enable our customers to manage the transition phase, below are some details:

- Effective 01.10.2003 the mini PLCs Simatic S5-90U, -95U/F and -100U were defined to be phasing out. That means these models are no longer included in any catalogue.
- For the S5-115U modelst he phase-out period was started 01.10.2004.
- For larger models such as S5-135/155U the phase-out period was started 01.10.2005.

One year after the start of the phase-out period, the mentioned models were classified "spare parts" that will remain available for another nine years.

That means, the models S5-90U, -95U/F and -100U shall be phased out effective 2013, the S5-115U effective 2014 and the S5-135/155U models effective 2015.

KLEIN recommend that those customers, who still operate S5 PLC models have their PLC upgraded to S7. Get in contact with us. We would be pleased to assist you.
